Building the Climate  
Change Bridge

# Building the Climate Change Bridge

*Net zero carbon was a great start. But it is time to move on and build the climate change bridge that will actually solve rising ocean coastlines, biodiversity loss, desertification, depletion of fresh water supplies and ocean pollution without destroying global economies along the way.*

*—James Michael Matthew*

# Building the Climate Change Bridge

*“Winning the battle against global warming is not about carbon emissions or net zero carbon. It is not about technology. It is not about some arbitrary date that the world ends if net zero carbon is not met. Winning the battle against global warming is all about water.”*

# Primary Strategies To Build the Climate Change Bridge

1. Transfer ocean salt waters to the deserts of the World in sufficient quantities to build a centuries' long runway to control rising ocean coastlines.
  - a) Create (dig) inland seas to transfer the ocean waters into.
  - b) Build pipelines for water transfer.
2. Desalinate those transferred salt waters to be used to reverse groundwater and surface fresh water depletion and ultimately increase the World's usable and available fresh waters to 5% of the earth's total water (a 10X multiple increase).
  - a) Build desalination plants and nuclear, solar, geothermal, and/or hydro electric power plants along side the inland seas.
3. Use the infrastructure developed in the above to reverse biodiversity loss, desertification and ocean pollution.

# Primary Strategies To Build the Climate Change Bridge, Continued

1. Build and gain consensus of Federal, State and Local authorities.
2. Build a chain of inland seas in North America. Under this plan, the States of Utah, Nevada, California, Arizona and New Mexico would all have one inland sea dug in their deserts. There would also be 2 additional inland seas dug and related facilities built in Northern Mexico.
3. Focus our initial projects on:
  1. The Great Salt Lake
  2. The Colorado River Basin

# Ownership of Assets

- Current Desert Land Owners Continue to Own Inland Seas and Own Pipelines:
  - Federal
  - States
  - Local Municipalities
- Enter Into Public Private Partnerships (PPPs) and/or Leases for Lands Adjacent to Created Inland Seas with JM Prophecies (JMP) for Construction of:
  - Power plants and facilities
  - Desalination plants and facilities
  - Irrigation of adjacent lands – Forms desertification remediation programs & new agriculture
  - Biodiversity facilities including fisheries, marine research and water pollution remediation
  - Tourism, Residential Developments, Industrial Developments
  - Outgoing Fresh Water Pipelines Systems to Sell and/or Replace Ground and Surface Water Use

# Private Sector Teaming Partners (TBD)

- General Contractor Overall Supervision
- Excavation Equipment Manufacturer
- Pipelines Construction, Operations and Maintenance
- Inland Seas Excavation and Construction
- Desalination Facilities Construction and Operations
- Energy/Power Plants Facilities Construction and Operations
- Biodiversity Facilities Construction and Operations
- Tourism Facilities Construction and Operations
- Commercial and Residential Real Estate Developments

# Private Sector Teaming Partners (TBD), Continued

- Desalinated Fresh Waters Outgoing Distribution and Sales
- Agricultural Developments, Sales and Leases
- Research Facilities Construction and Operations
- Ocean Pollution Remediation Facilities Construction and Operations
- Construction and Leasing for Fisheries and Other Direct Commercial Industries
- Research and Training for International Partnerships for Replication in Other Countries

# Paying for the Climate Change Bridge

- Public Sector Financing:
  - Federal
  - States
  - Local Municipalities
  - International for Replication in Other Countries

# Paying for the Climate Change Bridge, Continued

- Private Sector Ownership and Financing for:
  - Power plants
  - Desalination plants and sale/distribution of fresh waters:
    - Fresh water sales to private sectors
    - Fresh water sales to other public sector municipalities
  - Fisheries
  - Agriculture developments
  - Forestry
  - Incubators and research
  - Tourism:
    - Ski slopes construction and/or development
  - General industrial and commercial real estate developments
  - Residential real estate developments

# Paying for the Climate Change Bridge, Continued

- Private Sector Ownership and Financing for:
  - Sales of excavated sand
  - Sales of carbon credits
  - Creation and sales of new type of carbon credits – ocean coastlines reduction credits
  - Insurance industry partnerships for reducing catastrophic losses due to global warming
  - Forward sales contracts for fresh water, sand and other new created commodities contracts
  - Forward sales contracts for replication in other countries
  - Creation of a new financial exchange trading in:
    - Carbon credits
    - Ocean coastlines reduction credits
    - Insurance options

# Management

James Michael Matthew, Founder and Chairman,  
JM Prophecies Corporation

- Author and 40 years experience as a financial executive and industrialist across many industries.
- Mr. Matthew graduated from The Johns Hopkins University with a Masters in Biotechnology Enterprise and Entrepreneurship, an MBA from Michigan State University, and a Bachelor of Arts in Accounting and Auditing from the University of Illinois-Springfield. Mr. Matthew has completed post graduate studies in Law and Sustainability and the Future of Sustainable Business from the Smith School of Enterprise and the Environment, the University of Oxford. Mr. Matthew is a Member of The National Society, Sons of the American Revolution.
