Drone Boats and Ships Mounted With Industrial Chillers for Cooling Ocean and Inland Waters

CURRENT CAPABILITIES INCLUDE THE FOLLOWING

## **Cooling ocean waters and inland waters for coral reefs, oyster beds, clam beds, salmon and trout streams, and other habitats:**

- Given the reapplication of an agricultural irrigation sprinkler system, the sprinkler pattern of a single chiller boat has a radius of 75' so that the impacted area for cooling is a constant 150' in diameter x 150' depth.
- A single chiller boat will cool a 150' diameter x 150' deep volume of water by 10 degrees every 12 hours @ 45,000 gallons/hour.
- Given the constant mixing of the water due to waves/tides, it is still possible to cool the given area by 4-5 degrees.
- Therefore, a recommended (10) boat fleet w/ overlapping spray patterns can cool an area of up to 1500' x 1500' x 150' deep by 4-5 degrees.
- We anchor the chiller boats in place and dynamically program the sprinkler patterns per temperature buoys feedback and the resulting temperature grid.

## **Drone Boat Fleets to Detect and Monitor Illegal Fishing and Other Biodiversity Harming Illegal Activities – We work with local regulators and authorities.**

### **Our R&D and Future Applications**

We are actively conducting research on the following products and services. We are seeking partners for each of these applications.

- Outfitting our industrial chillers on larger ships and fleets to cool ocean waters in advance of hurricane pathways to reduce the severity of hurricanes.
- Integrating our drone boat fleets with local “militia” to eradicate invasive species.
- Integrating our drone boat fleets into domestic and international maritime transport. Our current electric and onboard solar powered drone boats can effectively carry cargo equivalent to approximately 2/3 of a standard cargo container, but with very low draft capabilities.
- Military applications for our drone boat fleets including kamikaze capabilities.
- Submersible drone models capable of arctic waters operations for both commercial and military applications.
- Drone boats that can break up and drag large patches of algae blooms and other vegetation from shorelines to deeper waters or deserted islands.
- Greenland fjords mapping, which is needed to more accurately predict ice melting in Greenland and global sea levels.

Defeating Climate Change and Building The Climate Change Bridge

CURRENT CAPABILITIES INCLUDE THE FOLLOWING

## **James Michael Matthew Institute**

- Online Climate Change Courses
- Online Communities dedicated to building working groups to defeat global warming and climate change under our core strategies which are to:
  - Import ocean waters into the great deserts of the World.
  - Desalinate those imported salt waters and distribute the new freshwaters to create new productive lands, and “ocean front” properties, and reverse desertification. We call this strategy our “5% Freshwaters Goal”. Only 0.5% of the water on the planet is available and usable freshwater. We say we need a 10X increase to get to 5% of the water on the planet as usable freshwater.
  - Use the new productive lands and freshwater to reverse biodiversity loss and ocean pollution. We believe this is the greatest economic opportunity for our Nation since the Louisiana Purchase.
- James Michael Matthew Podcast

## **The Leadership Broadcasting Company: Documentaries to Defeat Climate Change.**

## **Our R&D and Future Applications**

We are actively conducting research on the following products and services. We are seeking partners for each of these applications.

### **Development of an interactive online dashboard that would include the following:**

- **Interactive Map**
- **Interactive Climate Solutions Data Model**  
This dashboard will be devoted to the climate change scientists of the World to interact with one another to provide us with consensus data models regarding rates and volumes of water flows required.
- **Interactive Financial and Units Forecasting Models**  
This platform will provide comprehensive financial forecast models to demonstrate this strategy is the greatest financial opportunity for the Nation since the Louisiana Purchase.
- **Interactive Draft Enabling Legislation**  
This platform will enable decision makers to develop the enabling legislation to implement these strategies.

## **Quarterly Publication**

As soon as practical and after sufficient responses have been posted, we plan to publish a quarterly periodical comprised of white papers and articles that authors would submit.

**Leadership Broadcasting Company: Climate Change Channel - on-site documentaries, focus groups, town hall meetings.**
